KICKSTREAM IT SOLUTION

The match goes live with the studio.

Kickstream is live-streaming software for football.

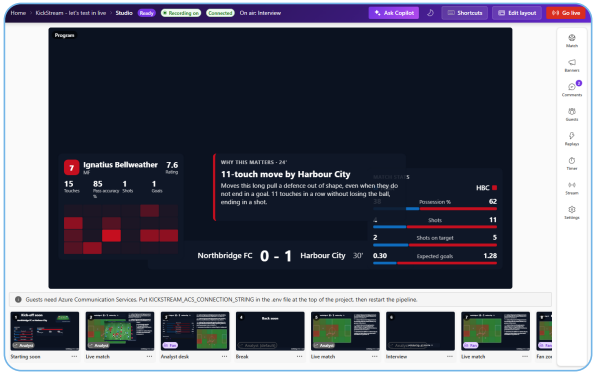

STUDIO YOUTUBE X TWITCH

The studio sends the match, and the match explains itself.

YouTube, X, Facebook and Twitch. One encode.

This is the program the host sends

Click to switch

Numbers 1–9 are labels. Keyboard shortcuts are not implemented.

One picture

ffmpeg copies it. Destinations do not get a second encode.

Why it matters

English, at most 20 explanations a match.

SECTION 1

The product

01

THE PRODUCT

Four jobs, one broadcast

Go live

Home, broadcast, studio. One Go live control.

Show the match

Score, pitch, banners and narration on the program.

Bring guests

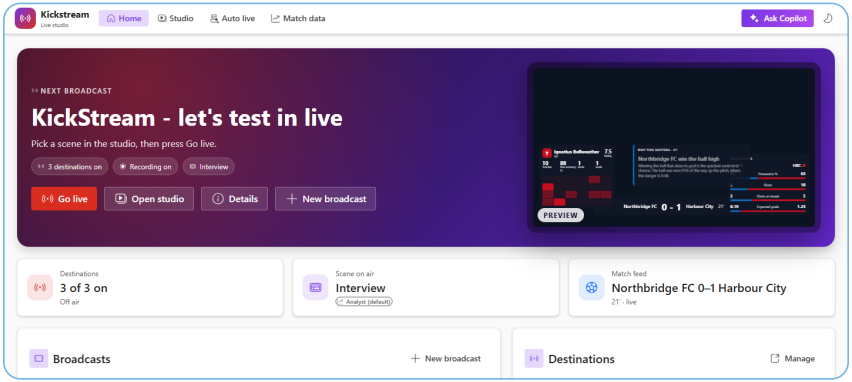

Speaker, co-host, member. Four seats on stage.

Cut reels

Up to four 15-second vertical clips.

A scene library is shared. Live match speaks as a fan, Analyst desk as an analyst.

Home is the operator’s desk

Local demo. Next broadcast, program preview, destinations still off air.

THE PRODUCT

Create, compose, go live, then cut

Takeaway Record to file needs no stream key. YouTube, Facebook and Twitch need a key. X also needs that account's server address.

The host's line, in the product's words

HOST

"Put the match on YouTube, X, Facebook and Twitch without stitching the graphics on afterwards."

OPERATOR

"Keep a channel on overnight, and restart it if the encode drops."

Sound is the call
Unmuted guests and the host. Otherwise silence.

Words have a fallback
Templates when no model is configured.

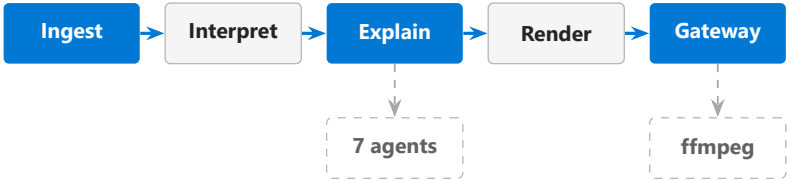

Auto live waits
It does not fight a studio that is already on air.

SECTION 2

The system

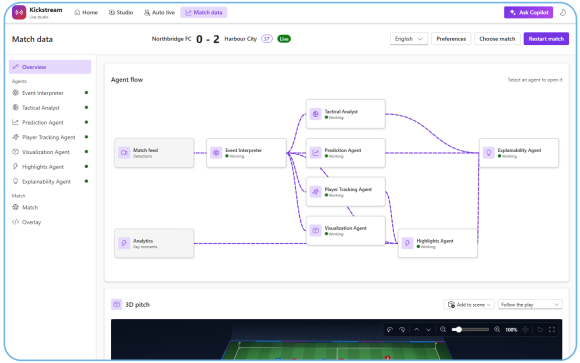

02

One process, five stages, one encode

Memory holds the match, the studio and the encode. Files sit on Azure Files. The match log sits in Cosmos DB match_log.

Seven agents, all of them working

The match page draws the same flow the pipeline runs.

Synthetic score
Northbridge and Harbour City. Fictional clubs.

3D pitch
Only the ball and the player on it are known positions.

THE SYSTEM

Seven agents, one of them writes

Agent	What the match page shows
Event Interpreter	Third, flank, phase, danger
Tactical Analyst	Pressure, tempo, patterns, control or chaos
Prediction	Win, draw, loss, next ten minutes
Explainability	English “why this matters”, at most 20 a match
Visualization	3D pitch from the ball and the player on it
Player Tracking	Rating, heat map, distance, top speed
Highlights	Ranked moments and hidden events

THE SYSTEM

Templates carry the show when the model is absent

WORDS

WITH A MODEL
Foundry, or an OpenAI-compatible endpoint. Cached per mode and language.

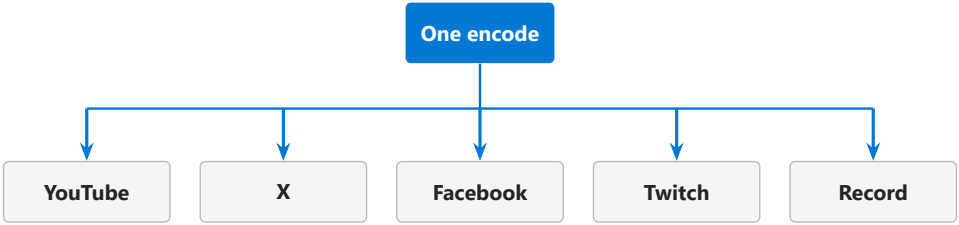

WITHOUT ONE
Scripted narration. The item is marked scripted.

MATCH

DEPLOY DEFAULT
The synthetic match. Fictional clubs. Same seed, same game.

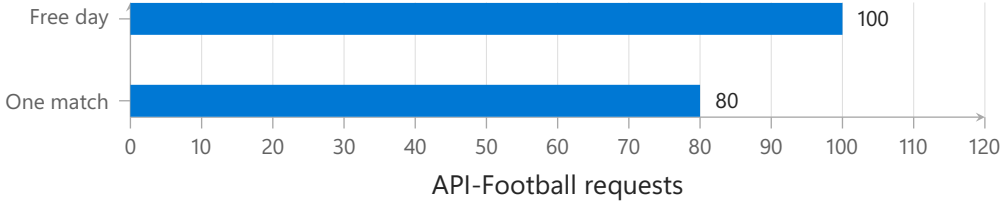

OPTIONAL FEEDS
StatsBomb, API-Football, OpenLigaDB. Off unless real_sources.

One encode, five places

ffmpeg copies that one picture. A failed destination does not stop the others.

A free day barely holds one match

About 80 requests for one match. The free plan is about 100 a day. Provider limits, not a measured audience.

SECTION 3

Running it

03

RUNNING IT

The deploy is one replica in Central India

1
replica. Memory is not shared.

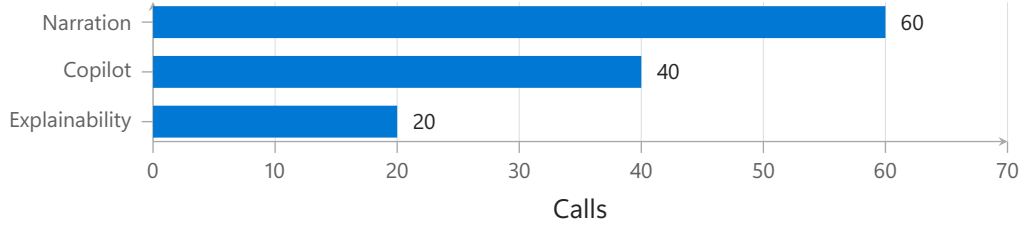

2
vCPU. ffmpeg and the hidden browser.

4Gi
memory. 2 GiB for each vCPU.

90d
Cosmos match-log TTL.

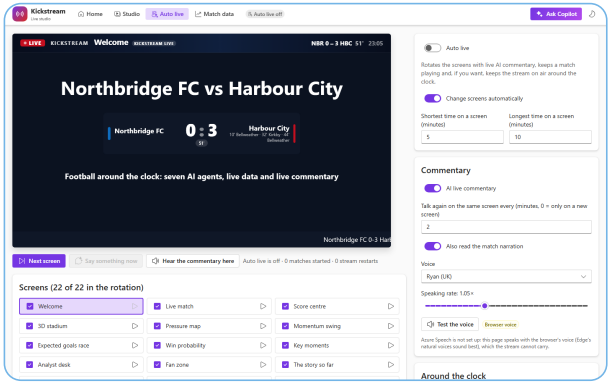

Region default centralindia. Probes call /api/health on port 8000, past the sign-in.

Calls the product allows in one match

Caps from the product, not a measured audience. Past the cap, templates or assembled answers take over.

Auto live rotates twenty-two screens

Off until the operator turns it on. A screen stays 5 to 10 minutes.

Only Azure speech is carried on the captured stream.

Entra guards the studio. Guests stay on the invite

AzureADMyOrg
The deployer and studio_users. Header x-ms-client-principal-id.

Public view is read-only
/live and /match without a sign-in. Studio pages still redirect.

Keys stay off the page
Stream keys are not returned. Cosmos local keys are disabled.

A co-host is an operator
They can go live, and they can end or delete the broadcast.

RUNNING IT

Two fronts, one product

AzureADMyOrg. The app reads x-ms-client-principal-id.

A restart keeps files and the log

Memory gone

Files remain

Cosmos log remains

Auto live can start a 24/7 stream again from saved settings.
A studio encode does not resume itself.

Four limits to say out loud

Limit	What it means for this repository
StatsBomb	StatsBomb Open Data is non-commercial and must not ship in a paid offer.
Marketplace	Kickstream does not implement Microsoft Marketplace SaaS fulfillment, an Entra purchase landing page, or a live Partner Center offer.
One box	A second replica would not see this match, this studio, or this ffmpeg process.
Speech	Only Azure speech is on the captured stream. The browser voice is silence on air.

Ship the studio. The purchase flow is not in the product.

Synthetic match by default. Paid offers leave StatsBomb out.
